Working collaboratively with teams to take on new challenges that allow me to apply and expand my knowledge. Here's where my love for computers has taken me so far!

Generalist Programmer, Unity *May 2022 - August 2023*

Kibble Games Studio - Brie Parmesan Mysteries Sweden, Remote

Final Project "Crimes of the Furred Kind" funded into a full-length, published game.

- Cloud Save/Load Data and Remote Configuration

Using Unity's remote configuration I created a saving system that could be remotely configured using Unity3D's dashboard API. This allowed for remote tuning of gameplay values without the need of a new build.

- Shop Systems and Cosmetics

Gameplay affecting cosmetics unlocked through gameplay offering powerups to the player such as double points, movement speed, etc.

- AI Behaviour

Using StateMachines I created patrolling enemies the player would have to avoid, as well as assisting states for the player when traversing the level, or interacting with the environment.

Engine Programmer, RHE *August 2025 - April 2026*

TGA School Project - Rabbit Hole Engine Stockholm, Sweden

Our very own Engine that I've helped build and maintain, working on component systems, level/asset loading, rendering, as well as exposing gameplay variables I've worked on through UI elements. Ask me about it!

Gameplay Programmer, RHE *December 2025 - April 2026*

TGA School Project - BotOps. Stockholm, Sweden

- Enemy Wave System

In this Call of Duty Zombies-inspired FPS, I created a wave-based enemy system that allows our level designers to use visual scripting to build their own waves, and decide which waves drop Key items for the player progression.

- Sublevel Loader and NavMesh Stitching

To assist our level designers I created a system which reads and stitches together multiple scenes (levels) and their navmeshes together, meaning our LD's can work on the same map in multiple separate files at the same time..

- Prototyped Core Gameplay Features

Identified and prototyped missing features to prevent blockers for other disciplines. Writing simple code that can be expanded upon by other people.

Skills

C++

C#

Maintaining In-House Engines

Unreal Visual Scripting

Problem Solving (Googling, documentation)

Task Tracking

Version Control

Tools

Unity Engine & Unreal Engine

Git / Perforce (P4v)

Google Sheets/Excel

Click-Up / YouTrack / Jira

Photoshop

Superluminal/Pix/Visual Studio Profiler

RenderDoc

Languages

Swedish

English

Passions

Multiplayer & Singleplayer Video Games

Game Jams

D&D and Pathfinder and Lancer and Mörkborg

Collecting glass figurines across the world

Education

The Game Assembly - TGA

August 2024 - Ongoing (April 2027)

Game Developer/Programmer

Vancouver Film School - VFS

October 2021 - October 2022

Graduated with Honours

Game Design

Wendela Hebbegymnasiet

August 2017 - June 2020

Game Design
